

Use of AI Declaration

ChatGPT-5 (<https://chatgpt.com/>) was used to assist with coding the HTML portfolio.

Attached are some excerpts of the conversation used to generate the code:

What is the best way to embed multiple videos and powerpoint files into one document

Good question — the best method depends on **what kind of “document”** you want the final product to be (e.g. Word, PowerPoint, PDF, or HTML). Here’s a breakdown of the best approaches for each major format:

4. HTML or Webpage (for fully interactive use)

✅ **Best for:** Online sharing or digital portfolios.

How:

- Use an HTML file (or an app like Notion, Google Sites, or Canva Docs).
- Embed:

html

 Copy code

```
<iframe src="video.mp4" width="640" height="360"></iframe>
<iframe src="slides.pdf" width="640" height="480"></iframe>
```

- You can host locally or on a site (GitHub Pages, Google Drive, etc.).

Example: Embedding a webpage inside your HTML

html

 Copy code

```
<!DOCTYPE html>
<html>
<head>
  <title>Embedded KEGG Page</title>
</head>
<body>
  <h1>KEGG Website Embedded</h1>
  <p>This is the KEGG homepage displayed inside this HTML page:</p>

  <iframe src="https://www.kegg.jp"
    width="100%"
    height="600"
    style="border:1px solid #ccc;">
  </iframe>

</body>
</html>
```
